

SOUND QUALITY IN FOCUS

Conclusion:

“The MTT 990 from Magnat is a turntable that follows the specifications of the popular Japanese drives of the 70s and 80s and transfers them to the present day. Through meticulous fine tuning in their development department, the Pulheim hi-fi specialists have achieved an excellent result. The quartz-stabilized direct drive ensures wonderful running properties, while the elaborately optimized 10-inch arm guides suitable pickup systems perfectly through the grooves. Designed without any additional features such as a limit stop, USB port or phono preamp, the MTT 990 is deliberately not geared towards the newly acquired vinyl fan. Rather, it is aimed more at the advanced enthusiast, who strives for optimum sound quality and finds fulfillment in gradually upgrading and optimizing their system, audio head, mat or cable; this turntable provides an excellent starting point in this regard. Last but not least, the first Magnat turntable in this philosophy and style is naturally perfect for the numerous fans of old-school technology.”
