

OUTSTANDING

A CLASSIC DESIGN WITH SOLID TECHNOLOGY

“[...] In terms of technology, Magnat has once again gone to town on its components and their well thought out layout within a compact system like the Active 2000.

“[...] Practical, high-quality and powerful are words that also describe the technical configuration of Magnat’s Active 2000 monitor system.”

“[...] The process of installing and commissioning the Active 2000 is child’s play and takes just a few minutes.”

“[...] The sound generated by the Active 2000 system is crisp and dynamic throughout. However, we are hardly surprised. After all, Magnat really should know a thing or two about developing speakers. And that’s definitely the case here.”

“[...] When you consider the fact that this type of performance was only previously delivered by high-priced compact systems, you will be amazed at what Magnat has achieved here in terms of sound pattern and volume.”

Conclusion:

“[...] The potential range of use of the Active 2000 is amazing. It allows us to connect any audio device in a meaningful manner. Whether you connect via cable or Bluetooth, the system is capable of generating a wonderful sound from a TV or computer thanks to the optical input. This makes the Magnat Monitor Active 2000 a powerful, compact system when it comes to playing various audio sources without an additional amplifier - all in a stylish design.

[...] You can definitely see the Active 2000 system as the little brother of the Multi Monitor 220, because both systems are very similar. Except for the price, because it is extremely reasonable for such a system (in the manufacturer’s range). If you’re not afraid of making a grand entry to a world of good hi-fi for a price of €349, you definitely won’t regret your purchase. We can certainly vouch for this.”
