Bluetooth® Qualcomm® aptX™

Test result:

“With the RV 4, Magnat conveys the tube amplifier concept with exceptional success into the present. The hybrid character congenially complements the additional sound benefit from the tubes thanks to the high performance and imperturbable stability of the transistor amp, whereas the new digital input options satisfy the requirements of modern media players. Magnat perfectly succeeded in reaching the challenging balance between “conservation“ and ”advancement“. But first of all the strikingly massive integrated amplifier thrills us by its most important feature: an outstanding precision paired with a strong sound charisma and an enormous liveliness, that finally grants the great emotionality of the music experience.“
